

Contents (McDermott & Orton)

Preface

Acknowledgements

Chapter 1 Mathematics Review

- 1.1 Exponents
- 1.2 Logarithms
- 1.3 Geometry
- 1.4 Trigonometry
- Problems

Chapter 2 Review of Basic Physics

- 2.1 Units for Physical Quantities
- 2.2 Mechanics
- 2.3 Electricity and Magnetism
- 2.4 Electromagnetic Spectrum
- 2.5 The Special Theory of Relativity
- 2.6 Review of Atomic Structure
- 2.7 What is
Radiation?
Problems
Bibliography

Chapter 3 Atomic Nuclei and Radioactivity

- 3.1 Basic Properties of Nuclei
- 3.2 Four Fundamental Forces of Nature
- 3.3 Nuclear Binding Energy: Mass Defect
- 3.4 Stability of Nuclei
- 3.5 Antimatter
- 3.6 Properties of Nuclei and Particles
- 3.7 Radioactivity
- 3.8 Mathematics of Radioactive Decay
- 3.9 Activity
- 3.10 Half-Life
- 3.11 Mean-Life
- 3.12 Modes of Decay
- 3.13 Decay Diagrams
- 3.14 Sources of Radionuclides
- 3.15 Radioactive
Equilibrium Chapter
Summary
Problems
Bibliography

Chapter 4 X-ray Production I: Technology

- 4.1 Introduction
- 4.2 X-ray Tubes
- 4.3 Therapy X-ray Tubes
- 4.4 Imaging
- 4.5 Digital Imaging
- 4.6 X-ray Generator
- Chapter Summary
- Problems
- Bibliography

Chapter 5 X-ray Production II: Basic Physics and Properties of Resulting X-rays

- 5.1 Production of X-rays: Microscopic Physics
- 5.2 X-ray Spectrum
- 5.3 Efficiency of X-ray Production
- 5.4 Directional Dependence of Bremsstrahlung Emission
- 5.5 X-ray Attenuation
- 5.6 Half-value Layer (HVL)
- 5.7 Mass Attenuation Coefficient
- Appendix: Röntgen and the Discovery of X-rays
- Chapter Summary
- Problems Bibliography

Chapter 6 The Interaction of Radiation with Matter

- 6.1 Photon Interactions with Matter
- 6.2 Interaction of Charged Particles with Matter
- 6.3 Neutron Interactions with Matter
- 6.4 Cherenkov Radiation
- 6.5 Chapter Summary
- Problems
- Bibliography

Chapter 7 Radiation Quantities

- 7.1 Introduction
- 7.2 Exposure
- 7.3 Charged Particle Equilibrium
- 7.4 Some Important Radiation Dosimetry Quantities
- 7.5 Dose Buildup and Skin Sparing
- 7.6 Absorbed Dose to Air
- 7.7 Dose in a Medium Calculated from Exposure
- 7.8 Dose in Free Space
- 7.9 An Example of Photon Interactions: History of a 5.0 MeV Photon in Water
- 7.10 Monte Carlo Calculations
- 7.11 Microscopic Biological Damage Chapter

Summary
Problems
Bibliography

Chapter 8 Radiation Measurement and Detection

8.1 Introduction
8.2 Phantoms
8.3 Gas Ionization Detectors
8.4 Solid-State Detectors
8.5 Liquid Dosimeters
8.6 Neutron Survey
Meters Chapter
Summary
Problems
Bibliography

Chapter 9 Medical Linear Accelerators

- 9.1 Introduction
- 9.2 Accelerating Waveguides
- 9.3 Bending Magnets
- 9.4 Sources of Microwave Power
- 9.5 The Treatment Head
- 9.6 Field Shaping
- 9.7 Auxiliary Subsystems
- 9.8 Interlocks and Safety Systems
- 9.9 Patient Support Assembly
- 9.10 Photon Beam Characteristics
- 9.11 Flattening Filter Free Linacs
- 9.12 X-Band Linacs
- The Invention of the Cavity Magnetron
- Chapter Summary
- Problems
- Bibliography

Chapter 10 Central Axis Dose Distribution

- 10.1 Introduction
- 10.2 Percent Depth Dose (PDD)
- 10.3 Dependence of d_m on Field Size and SSD
- 10.4 Tissue-Air Ratio (TAR)
- 10.5 Backscatter and Peak Scatter Factors
- 10.6 Tissue-Phantom Ratio (TPR) and Tissue-Maximum Ratio (TMR)
- 10.7 Ratios of Doses on the Central Axis
- 10.8 Equivalent Squares
- 10.9 Linear
- Interpolation
- Chapter
- Summary
- Problems
- Bibliography

Chapter 11 Calibration of Megavoltage Photon Beams

- 11.1 Normalization Conditions
- 11.2 Steps in Beam Calibration
- 11.3 Ion Chamber Calibration
- 11.4 Beam Quality
- 11.5 The Task Group 51 Dose Equation
- 11.6 Calibration Conditions
- 11.7 An Example of TG-51 Calculations
- 11.8 Constancy Checks of Beam
- Calibration Chapter

Summary
Problems
Bibliography

Chapter 12 Monitor Unit Calculations

12.1 Introduction
12.2 Normalization Conditions
12.3 Head Scatter and Phantom Scatter
12.4 Monitor Unit Calculations for Open Fields
12.5 Monitor Unit Calculations for Shaped Fields
Chapter Summary
Problems
Bibliography

Chapter 13 Dose Distributions in Two and Three Dimensions

13.1 Isodose Charts
13.2 Skin Contour
13.3 Parallel-Opposed Fields
13.4 Wedges
13.5 Multiple Beams
13.6 Defining Target Volumes
13.7 Surface Dose
13.8 Bolus
13.9 Beam Spoilers
13.10 Tissue Inhomogeneities
13.11 Peripheral Dose
13.12 Convolution/Superposition Dose Calculation Algorithms
13.13 Field Matching
13.14 Patient Positioning and Immobilization Devices
Chapter Summary
Problems
Bibliography

Chapter 14 Evaluation of Patient Dose Distributions

14.1 Introduction
14.2 Cumulative Dose-Volume Histograms
14.3 Biological Indices
Chapter Summary

Problems
Bibliography

Chapter 15 Intensity Modulated Radiation Therapy

- 15.1 Introduction
- 15.2 IMRT Delivery Techniques
- 15.3 Inverse Treatment Planning
- 15.4 Practical Inverse Planning Issues
- 15.5 Volumetric Modulated Arc Therapy
- 15.6 Physics Patient-Specific IMRT QA
- Chapter
- Summary
- Problems
- Bibliography

Chapter 16 Electron Beam Dosimetry

- 16.1 Introduction
- 16.2 Electron Applicators
- 16.3 Field Shaping
- 16.4 Dose Rate Calculations
- 16.5 Internal Blocking
- 16.6 Isodose Curves
- 16.7 Inhomogeneities
- 16.8 Field
- Matching
- Chapter
- Summary
- Problems
- Bibliography

Chapter 17 Physical Principles of Brachytherapy

- 17.1 Introduction
- 17.2 Review of Radioactivity
- 17.3 Radioactive Sources
- 17.4 High Dose Rate Remote Afterloaders
- 17.5 Electronic Brachytherapy
- 17.6 Brachytherapy Applicators
- 17.7 Source Strength and Exposure Rate Constant
- 17.8 Dose Rate Calculations from Exposure Rate
- 17.9 Revised Specification of Source Strength
- 17.10 Task Group 43 Dosimetry

17.11	Source Calibration
17.12	Accumulated Dose from Temporary and Permanent Implants
17.13	Systems of Implant Dosimetry
17.14	Intracavitary Brachytherapy
17.15	Prostate LDR Brachytherapy
17.16	Along and Away Tables
17.17	Localization of Sources
17.18	A Few General Treatment
	Planning Principles Chapter
	Summary
	Problems
	Bibliograph
	y

Chapter 18 Radiation Protection

18.1	Who Regulates What?
18.2	Dosimetric Quantities Used for Radiation Protection
18.3	Exposure of Individuals to Radiation
18.4	Biological Effects of Radiation
18.5	Radiation Protection Principles
18.6	NRC Regulations
18.7	Personnel Monitoring
18.8	Shipment and Receipt of Radioactive Packages
18.9	Shielding Design for Linear Accelerators
18.10	Using a Survey
	Meter Chapter
	Summary
	Problems
	Bibliography

Chapter 19 Imaging in Radiation Therapy

19.1	Introduction
19.2	Digital Images
19.3	Image Quality
19.4	Computed Tomography
19.5	Magnetic Resonance Imaging
19.6	Image Fusion/Registration
19.7	Ultrasound Imaging
19.8	Functional/Metabolic Imaging
19.9	Imaging for Treatment Localization/Verification
19.10	Imaging Dose
	Chapter Summary
	Problems
	Bibliography

Chapter 20 Special Modalities in Radiation Therapy

- 20.1 Introduction
- 20.2 Stereotactic Radiosurgery
- 20.3 Stereotactic Body Radiation Therapy
- 20.4 Total Body Irradiation
- 20.5 Total Skin Electron Therapy
- Chapter Summary
- Questions/Problems
- Bibliography

Chapter 21 Physical Quality Assurance and Safety

- 21.1 Introduction
- 21.2 Radiation Therapy Accidents
- 21.3 Safety Culture and Department Management
- 21.4 Proactive QA: Failure Modes and Effects Analysis
- 21.5 Equipment Quality Assurance
- 21.6 NRC Regulations Pertaining to QA
- 21.7 Dosimetry Instrumentation
- 21.8 Patient Quality Assurance
- 21.9 *In-Vivo* Dosimetry
- 21.10 Mold Room Safety
- 21.11 Pacemakers and Implantable Cardioverter Defibrillators
- Chapter Summary
- Problems
- Bibliography

Chapter 22 Proton Therapy Physics

- 22.1 Introduction
- 22.2 Advantages of Protons
- 22.3 Proton Therapy Accelerators
- 22.4 Beam Spreading and Field Shaping
- 22.5 Beam Delivery and Transport
- 22.6 Treatment Planning and Dose Distributions
- 22.7 Calibration and Routine Quality Assurance
- 22.8 Radiation Safety
- 22.9 Carbon Ion Therapy
- 22.10 Future
- Developments
- Chapter
- Summary
- Questions/Problems
- Bibliography
